PROTOTYPE OVERVIEW

The prototype consists of three main screens:

FRAME 1: LOGIN SCREEN

Description

This screen allows users to **sign in or sign up** to access the app.

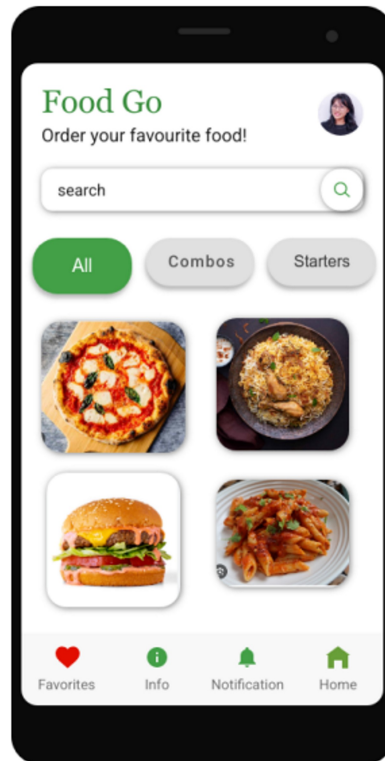

Navigation Elements

- **Familiar:**
 - Sign In / Sign Up buttons
 - “Forgot Password” option
 - “Remember Me” checkbox
- **Unfamiliar:**
 - Minimal navigation options (limited actions)

UX Insight

- Users easily understood this screen due to common design patterns.

Navigation Elements

- **Familiar:**
 - Bottom navigation bar (Home, Favorites, Notifications)
 - Search bar
- **Unfamiliar:**

UX Insight

- Familiar elements made navigation easy
- Unfamiliar labels caused slight confusion initially

FRAME 3: PRODUCT DETAILS SCREEN

Description

This screen displays details of a selected item (Pizza), including rating, description, and quantity selection.

Navigation Elements

- **Familiar:**
 - Rating system (4.8 stars)
 - Quantity selector (+ / – buttons)
 - Price display
- **Unfamiliar:**
 - Layout arrangement and styling of controls

UX Insight

- Users could understand actions but needed a few seconds to adapt

Observations

Familiar Navigation

- Easy to understand
- Faster interaction
- Required no learning

Unfamiliar Navigation

- Caused slight confusion initially
- Required exploration
- Became easier after repeated use

RESULT

- Users preferred **familiar navigation elements**

- However, **unfamiliar elements improved uniqueness and creativity**
- A combination of both provides the best user experience

CONCLUSION

This experiment shows that while **familiar navigation ensures usability**, introducing **unfamiliar elements can enhance innovation**. A balanced design improves both **ease of use and visual uniqueness**.
