Layout & Color Scheme with User Feedback

INTRODUCTION

This experiment focuses on designing different **UI layouts and color schemes** for a mobile app and improving them based on **user feedback**. A **Vehicle Log App** was created using a **Royal Enfield-inspired black and gold theme**.

DESIGN OVERVIEW

Screens Designed

- **Dashboard:** Shows yearly (50%) and monthly (75%) goals using circular progress bars

- **Logs Page:** Displays travel history (Tambaram, Madurai, Trichy, etc.)

- **Maintenance Page:** Shows alerts like oil change, service, and tyre status with color indicators

LAYOUT & COLOR EXPERIMENTATION

- Tested **minimal layout** → less engaging
- Used **image-based layout** → more attractive (final choice)
- Applied **card layout** → improved readability
- Selected **black & gold theme** → premium look and high contrast

USER FEEDBACK (Google Forms)

Positive:

- Attractive premium design
- Easy-to-understand maintenance alerts

Negative:

- Background images slightly affect readability

IMPROVEMENTS

- Adjusted background opacity
- Improved text contrast
- Maintained consistent spacing and layout

CONCLUSION

The final design balances **aesthetics and usability**. User feedback helped refine the UI, making it more **clear, engaging, and user-friendly**.
