Storyboard Creation for Mobile App User Flow

INTRODUCTION

This experiment focuses on creating **storyboards** to visually represent the **user flow** of a mobile application. Storyboards help in understanding how a user interacts with the app step-by-step. The application designed is a **Vehicle Log App**.

STORYBOARD OVERVIEW

The storyboard represents the journey of a user managing their vehicle usage and maintenance through three main screens.

FRAME 1: DASHBOARD

Description

The user opens the app and lands on the **Dashboard**, which provides an overview of vehicle usage.

User Action

- Views yearly and monthly goals

Key Elements

- Yearly Goal → 50%
- Monthly Goal → 75%
- Visual progress indicators

Storyboard Insight

- User quickly understands their vehicle usage status

FRAME 2: LOGS SCREEN

Description

The user navigates to the **Logs page** to check travel history.

User Action

- Scrolls through past trips

Key Elements

- Locations with distance (Tambaram, Madurai, Trichy, etc.)
- Organized list layout

Storyboard Insight

- User tracks where and how far they have traveled

FRAME 3: VEHICLE MAINTENANCE

Description

The user checks the **Maintenance screen** for service updates.

User Action

- Reviews maintenance alerts

Key Elements

- Oil Change → Due in 50 km (Red)
- Service → Due in 200 km (Yellow)
- Tyre → Due in 500 km (Green)

Storyboard Insight

- User understands what maintenance is required and when

USER FLOW REPRESENTATION

1. User opens app → Dashboard
2. Checks progress → Navigates to Logs
3. Reviews travel history → Moves to Maintenance
4. Checks alerts → Plans vehicle servicing

CONCLUSION

The storyboard clearly represents the **step-by-step interaction** of the user with the app. It helps in designing a more **user-friendly and efficient interface** by understanding the complete user flow.
